Article Guidance

Article Text

NON-MEDICAL NECESSITY COVERAGE AND PAYMENT RULES

For any item to be covered by Medicare, it must 1) be eligible for a defined Medicare benefit category, 2) be reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member, and 3) meet all other applicable Medicare statutory and regulatory requirements. Information provided in this policy article relates to determinations other than those based on Social Security Act §1862(a)(1)(A) provisions (i.e. "reasonable and necessary").

Suction equipment is covered under the Durable Medical Equipment benefit (Social Security Act §1861(s)(6)). In order for a beneficiary's equipment to be eligible for reimbursement the reasonable and necessary (R&N) requirements set out in the related Local Coverage Determination must be met. In addition, there are specific statutory payment policy requirements, discussed below, that also must be met.

Saline used for tracheal lavage is a noncovered supply.

All items used with any suction pump, such as tracheal suction catheters (A4605, A4624), sterile water, saline used for suctioning (A4216, A4217), dressings, gastric tubes, etc. (not all-inclusive) are considered to be supplies for durable medical equipment. Therefore, when supplied to beneficiaries in nursing facilities, Place of Service Codes 31 and 32, they will be denied as noncovered as DME items are statutorily excluded from payment in facilities.

Disposable wound suction devices (A9270, A9272) and related supplies will be denied as statutorily noncovered because they do not meet the DME benefit durability requirement.

REQUIREMENTS FOR SPECIFIC DMEPOS ITEMS PURSUANT TO Final Rule 1713 (84 Fed. Reg Vol 217)

Final Rule 1713 (84 Fed. Reg Vol 217) requires a face-to-face encounter and a Written Order Prior to Delivery (WOPD) for specified HCPCS codes. CMS and the DME MACs provide a list of the specified codes, which is periodically updated. The required Face-to-Face Encounter and Written Order Prior to Delivery List is available [here](#).

Claims for the specified items subject to Final Rule 1713 (84 Fed. Reg Vol 217) that do not meet the face-to-face encounter and WOPD requirements specified in the LCD-related Standard Documentation Requirements Article (A55426) will be denied as not reasonable and necessary.

If a supplier delivers an item prior to receipt of a WOPD, it will be denied as not reasonable and necessary. If the WOPD is not obtained prior to delivery, payment will not be made for that item even if a WOPD is subsequently obtained by the supplier. If a similar item is subsequently provided by an unrelated supplier who has obtained a WOPD, it will be eligible for coverage.

POLICY SPECIFIC DOCUMENTATION REQUIREMENTS

In addition to policy specific documentation requirements, there are general documentation requirements that are applicable to all DMEPOS policies. These general requirements are located in the DOCUMENTATION REQUIREMENTS section of the LCD.

Refer to the LCD-related Standard Documentation Requirements article, located at the bottom of this Policy Article under the Related Local Coverage Documents section for additional information regarding GENERAL DOCUMENTATION REQUIREMENTS and the POLICY SPECIFIC DOCUMENTATION REQUIREMENTS discussed below.

When billing HCPCS code(s) A4605 and/or A4624 for beneficiaries with a tracheostomy, the diagnosis code indicating tracheostomy status must be entered on the claim form.

When billing HCPCS code(s) E0600, A7002 and A7047, the diagnosis code(s) for the condition(s) that justify the need for the item(s) must be entered on the claim form.

CODING GUIDELINES

A portable or stationary home model respiratory suction pump (E0600) is an electric aspirator designed for oropharyngeal and tracheal suction. This code also includes devices designed for purposes other than the removal of secretions. One example is a device used to apply suction via a mouthpiece to increase the size of the airway as a treatment for obstructive sleep apnea (Winx (Apnicure) or similar systems).

A portable or stationary home model gastric suction pump (E2000) is an electric aspirator designed to remove gastrointestinal secretions.

A closed system tracheal suction catheter (A4605) is a type of suction catheter that is protected by an outer sheath. It is connected to the ventilator circuit of a patient on

mechanical ventilation and left in place. Suctioning is accomplished without disconnection from ventilation.

A tracheal suction catheter (A4624) is a long, flexible catheter.

An oral and/or oropharyngeal catheter (A4628) is a short, rigid (usually) plastic catheter of durable construction.

An oral interface (A7047) is used as part of the Winx (Apnicure) or similar systems. This code is not to be used for oral appliances used to treat OSA or for any other type of oral suction appliances. Do not use the oral appliance HCPCS codes E0485 or E0486 for this interface.

Wound suction is provided with an integrated system of components. This system contains a pump (K0743) and dressing sets (K0744 – K0746). It does not include a separate collection canister (A7000), a defining component of Negative Pressure Wound Therapy (NPWT). Instead, exudate is retained in the dressing materials. Wound suction systems that do not contain all of the required components are not classified as wound suction systems. See below for component specifications.

HCPCS code K0743 describes a suction pump for wounds which provides controlled subatmospheric pressure that is designed for use with dressings, (K0744 – K0746) without a canister.

HCPCS codes K0744, K0745, K0746 describe an allowance for dressing sets which are used in conjunction with a stationary or portable suction pump (K0743) but not used with a canister. Each of these codes (K0744, K0745, K0746) is used for a single, complete dressing change, and contains all necessary components, including but not limited to non-adherent porous dressing, drainage tubing, and an occlusive dressing which creates a seal around the wound site for maintaining subatmospheric pressure at the wound. These dressing sets are selected based upon wound size using the smallest size necessary to cover the wound. For multiple wounds located close together, a single large dressing must be used rather than multiple smaller dressing sets if it is possible to fit the wounds under a single larger dressing set.

HCPCS code A9272 (WOUND SUCTION, DISPOSABLE, INCLUDES DRESSING, ALL ACCESSORIES AND COMPONENTS, ANY TYPE, EACH) describes a disposable wound suction device. Suction is developed through the use of any type of mechanism. This device includes all components, accessories and dressings. Code A9272 is all-inclusive. Supplies used with disposable wound suction systems are not separately billable. Examples (not all-inclusive) include: SNaP (Spiracure), PICO (Smith and Nephew), VAC Via (KCI). Disposable wound suction items other than those coded as A9272 must be coded A9270 (noncovered

item or service). For example, an elastomeric suction device would be correctly coded A9270.

CODING VERIFICATION REVIEW

The only products which may be billed using the following list of HCPCS codes are those for which a written coding verification review (CVR) has been made by the PDAC contractor and subsequently published on the Product Classification List (PCL). Information concerning the documentation that must be submitted to the PDAC for a CVR can be found on the PDAC website or by contacting the PDAC. A PCL with products which have received a coding verification can be found on the PDAC website. The effective date of the CVR is included for each code.

Effective for claims with dates of service on or after January 1, 2012:

K0743

If a product is billed to Medicare using a HCPCS code that requires written CVR, but the product is not on the PCL for that particular HCPCS code, then the claim line will be denied as incorrect coding.

Suppliers should contact the PDAC Contractor for guidance on the correct coding of these items.

Coding Information

CPT/HCPCS Codes

N/A

ICD-10-CM Codes that Support Medical Necessity

Group 1 (8 Codes)

Group 1 Paragraph

The presence of an ICD-10 code listed in this section is not sufficient by itself to assure coverage. Refer to the section on “**Coverage Indications, Limitations, and/or Medical Necessity**” for other coverage criteria and payment information.

For HCPCS Codes A4605 and A4624:

Group 1 Codes

Code	Description
J95.00	Unspecified tracheostomy complication
J95.01	Hemorrhage from tracheostomy stoma
J95.02	Infection of tracheostomy stoma
J95.03	Malfunction of tracheostomy stoma
J95.04	Tracheo-esophageal fistula following tracheostomy
J95.09	Other tracheostomy complication
Z43.0	Encounter for attention to tracheostomy
Z93.0	Tracheostomy status

ICD-10-CM Codes that DO NOT Support Medical Necessity

Group 1

Group 1 Paragraph

For A4605 and A4624 – All codes not listed above

For A7002, A7047 and E0600 - G47.33

For the remaining codes in this LCD - Not specified

Group 1 Codes

Bill Type Codes

Contractors may specify Bill Types to help providers identify those Bill Types typically used to report this service. Absence of a Bill Type does not guarantee that the article does not apply to that Bill Type. Complete absence of all Bill Types indicates that coverage is not influenced by Bill Type and the article should be assumed to apply equally to all claims.

N/A

Revenue Codes

Contractors may specify Revenue Codes to help providers identify those Revenue Codes typically used to report this service. In most instances Revenue Codes are purely advisory. Unless specified in the article, services reported under other Revenue Codes are equally subject to this coverage determination. Complete absence of all Revenue Codes indicates that coverage is not influenced by Revenue Code and the article should be assumed to apply equally to all Revenue Codes.
