Indications and Limitations of Coverage

Effective for services performed on or after January 28, 2005: “coverage with evidence development” applies to all FDG PET indications for all other cancers not previously specified in Section 220.6 above in its entirety.

For cancer indications listed as “coverage with evidence development” CMS has determined that the evidence is sufficient to conclude that an FDG PET scan is reasonable and necessary only when the provider is participating in, and patients are enrolled in, one of the following types of prospective clinical studies that is designed to collect additional information at the time of the scan to assist in patient management:

- A clinical trial of FDG PET that meets the requirements of Food and Drug Administration (FDA) category B investigational device exemption (42 CFR 405.201); or
- An FDG PET clinical study that is designed to collect additional information at the time of the scan to assist in patient management. Qualifying clinical studies must ensure that specific hypotheses are addressed; appropriate data elements are collected; hospitals and providers are qualified to provide the PET scan and interpret the results; participating hospitals and providers accurately report data on all enrolled patients not included in other qualifying trials through adequate auditing mechanisms; and, all patient confidentiality, privacy, and other Federal laws must be followed.

Medicare shall notify providers and beneficiaries where these services can be accessed, as they become available, via the following:

- Federal Register Notice
- CMS coverage Web site at: www.cms.gov/coverage 

(This NCD last reviewed March 2005.)
